ENDLESS SOLAR IS...

Endless Solar is the leader in high efficiency Evacuated Tube solar hot water systems. Specifically designed to **save you more money** during the colder months of the year, the Endless Solar system will heat your water all year round – even on cloudy or overcast days.

Most importantly, **Endless Solar systems are affordable**. They are also guaranteed with long warranties, require virtually no maintenance, have natural frost protection and can be installed on any Australian roof – even if your roof faces East or West.

The sleek, stylish and super-efficient design means that you can be environmentally responsible and **still have a great looking home**.

Endless Solar is an **Australian company**, with a solid track-record for supplying high quality solar hot water systems to both residential and commercial markets.

▲ Evacuated tubes catch & keep the sun's radiation, & reflect less of the sun's energy.

FROST PROTECTED

The Endless Solar system is perfect for cold climates; Tested to the latest Australian Standards for both Hail & Freeze Resistance without the need for a heat exchanger or Glycol (AS/NZ 2712: 2007) to temperatures as low as -15°C .

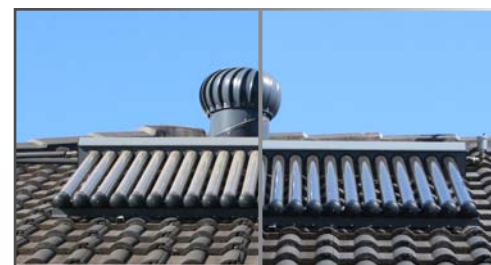

ON ANY ROOF

Endless Solar collectors are suitable for ANY Australian roof, and **do not** need to go on a north facing roof. They are also light-weight and modular to allow for an easy installation, without having to reinforce your roof.

SELF CLEANING

No climbing on your roof to wipe away grime, mould and pollution.

▲ Morning after the 2009 Sydney dust storms. ▲ Only 2 days later.

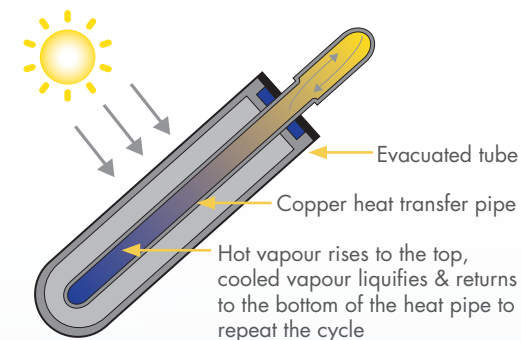

COMMERCIAL PROJECTS

Endless Solar specialises in designing large-scale hot water plants for commercial applications that require high volumes of hot water – from Bed & Breakfast accommodation, to multi-unit residential apartment blocks, to aged care facilities – and everything in between.

Endless Solar also has specialised computer modelling capabilities, providing energy modelling and custom design services. With an extensive range of commercial-grade Endless Solar systems pre-approved for STCs, we make your solar investment even more financially attractive.

Contact us for more information.

HOW DOES IT WORK?

▲ Solar energy absorbed by the heat pipe inside the tube.

EMERGENCY HOT WATER REPLACEMENT

Ask us, its easier than you think!

WHAT SYSTEM SIZE IS RIGHT FOR ME?

Contact your local supplier to discuss your hot water requirements. They will size a solar hot water system that's suited to your families needs.

REAL ROOFS, REAL RESULTS.

These days most businesses have become price driven at the expense of good old fashioned customer service. Fortunately there are some businesses that while keeping an eye on offering a competitive price still have a strong customer focus. The service that we have received from Endless Solar is proof enough of that.

– Graham & Annette B., Tyalgum Creek NSW

Your company's after sales service could not be better, and there is certainly a really friendly and professional 'feel' every time I ring the office – no matter who picks up the phone.

– Jeff K., Jerrabomberra NSW

We have just received our latest power bill - fabulous - have now been in credit for two billing periods and this is during the Armidale winter!

– Richard T., Member for the Northern Tablelands of NSW – and his wife, Rosemary.

Endless Solar made the whole process very simple and were always available to answer any queries that I had. I regularly get check-up calls from them to see if all is going smoothly (...it is). I have found the team at Endless Solar to be knowledgeable, helpful and extremely friendly. In my opinion they would be an excellent, reliable supplier of choice.

– Janet F., Northbridge NSW
